Human Zirconium Technology

ALL ZIRCONIA

Restoration on six implants

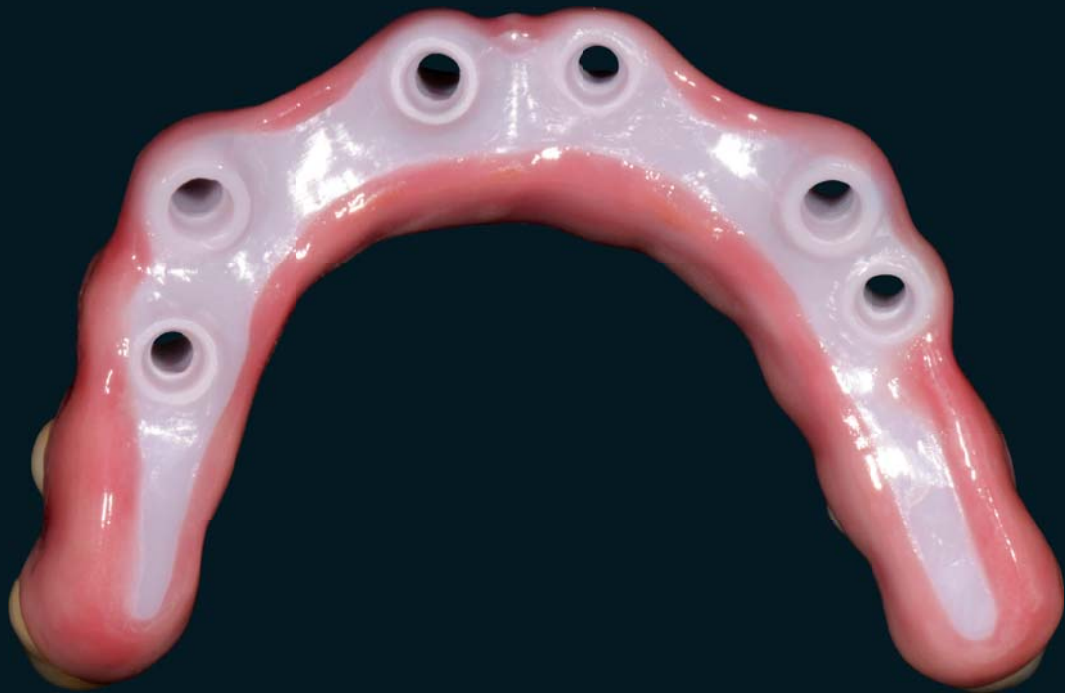

Initial situation: The treatment plan for this patient with severe overbite was to move the entire arch towards dorsal. In case of extreme retro-positioning like this, the use of a coloured zirconia frame was indicated as it simplifies the reconstruction with screw access channels located buccally in front of the teeth. The latter was veneered with pink *ICE-Zirconia-Ceramic-Tissue* material. The screw access channels were plugged with tissue-coloured composite (Gradia, GC).

Unfortunately, two of the screw channels ended up in the canines' area and both had to be capped by cement-on crowns.
